ALL INFORMATION CONTAINED  
HEREIN IS UNCLASSIFIED EXCEPT  
WHERE SHOWN OTHERWISE

Synopsis: To forward request for assistance by the [REDACTED]  
[REDACTED] regarding the murder investigation of former  
Russian Intelligence agent Alexander Litvinenko.

Details: THE FOLLOWING INFORMATION IS LAW ENFORCEMENT SENSITIVE  
AND IS THE BASIS FOR AN ON-GOING CRIMINAL INVESTIGATION. IT MAY  
NOT BE FURTHER DISSEMINATED WITHOUT THE PRIOR APPROVAL OF THE  
[REDACTED]  
[REDACTED]

(S) As background, Alexander Litvinenko is a former KGB  
officer who supposedly was the Deputy Head of Department 7  
(Assassinations). In 2000 he moved to the U.K. after being  
imprisoned by the [REDACTED] Litvinenko has previously provided  
information to the [REDACTED]

[REDACTED] regarding his former positions. Most  
recently, Litvinenko worked for Russian billionaire [REDACTED]  
[REDACTED] On 23 November, Litvinenko died of what appears to  
be radiation poisoning using the radioactive isotope POLONIUM  
210.

On 11/01/2006, Litvinenko was contacted by [REDACTED]  
[REDACTED] who supposedly had information

~~SECRET~~

~~SECRET~~

To: Baltimore From: London  
Re: 163G-LO-14031, 11/27/2006

regarding the death of Anna Politkovskaya (NFI). Litvinenko was suspicious of the encounter since the information provided was not of great importance. This meeting took place at 1500 hours at the ISHU Sushi bar in London. Supposedly the 5 page letter provided by [ ] was opened by Litvinenko over his food. According to police, the largest amount of Polonium 210 trace material was found at ISHU which indicates to the police that this is likely where the attack took place. It is unknown if [ ] was involved in the attack. If he was, it is unknown whether it was witting or unwitting involvement. [ ] has not yet spoken with [ ]

After departing the restaurant, Litvinenko went to the Millennium Hotel where he met with two Russians, possibly [ ] officers: FNU [ ] and [ ] LNU. According to Litvinenko, he was conducting a background investigation on a former [ ] officer named [ ] because a British Company was considering doing business with [ ] Litvinenko [ ]

[ ]

b6  
b7C  
b7D

[ ] has advised Litvinenko and later [ ] that [ ]  
[ ]  
[ ] It is believed that Litvinenko revealed the information found on [ ] to the Russians at the Millennium hotel. A discussion was initiated by [ ] about blackmailing [ ] with this derogatory information. Apparently Litvinenko thought this was a bad idea and could get [ ] killed.

After the meeting Litvinenko went home. At approximately 2330 hours, Litvinenko became very ill and suspected food poisoning. On 11/03/2006, he checked into the hospital and proclaimed that he was poisoned with Thallium. On 11/16/2006, the [ ] became involved in the investigation and on 11/20/2006, the investigation was [ ]  
[ ] During this time, [ ] was able to debrief Litvinenko on a few occasions prior to his death on 11/23/2006. It was not determined what poison was used to kill Litvinenko until 11/23/2006 when abnormal traces of Polonium 210 were identified in his urine. Polonium 210 apparently attacks the bone marrow and white platelets.

Traces of Polonium were located at ISHU restaurant, the Millennium Hotel and at his home. It is currently believed that

Best sites 

- **ALERT: URGENT MESSAGE TO UNITED NATIONS**

(35K)

Message to United Nations General Assembly from the Two Witnesses on September 29, 2006.

- **Ambassadors of Death (Associated Press)**

(7K)

The American Ambassador to Korea ordered U.S. troops to shoot refugees -- mostly women and children -- as they fled to safety in the south, during the Korean War.

- **Analysis of Solar Storm Effects (RIA Novosti)**

(8K)

- **Beyond Gericho's Walls: America, Free as Hell**

(32K)

This message was written on September 23, 2006, and details how Bush is planning mayhem in America for this year and the next. Toward the end of the message, under 'October Surprises: The Bulletin,' paragraph 3, read why the US Air Force announced 'testing of high-powered mind-control devices on ordinary Americans. Very serious.

- **Bush Arms Atomic India (Associated Press)**

(6K)

While ranting and raving over Iran's nuclear power plant research, Bush opened the trade floodgates to India's declared nuclear ENERGY AND WEAPONS programs.

- **CIA Implicated in Lebanese PM Death**

(1K)

A captured Al-qaeda operative discloses that the CIA and the Jewish Mossad offered him a deal if he would assert Syria's involvement in the Valentine's Day car-bombing of Rafiq Hariri.

- **Flight 1907 Deciphered**

(2K)

Aircraft crashes are a favorite form of human sacrifice to George W. Bush's Skull & Bones Society and related satanist clubs (Masons, etc.) The Freemasons, angered by their occult

symbolism being exposed in the article on September 11, 2001, decided to perform another satanic ritual based on data familiar to us. This message was distributed internationally on October 1, 2006, following the crash of Brazilian Flight 1907 two days before.

- **List of Email Recipients, "BRIEF HISTORY OF PRESENT"**

(12K)

- **Native Americans Came By Sea (Scripps Howard)**

(5K)

In Hebrew, HaiYah means 'YAH Lives,' and the universal Native American chant HaiYah is a praise to 'the Living One.' Evidence that the Indians are Old World immigrants is surfacing.

- **Polonium Alert Reply**

(8K)

This unmodified html document shows the email response from Dr. Stephen Evans at University College London Hospital, including record of a UCLH website administrator forwarding our original email on polonium poisoning to colleagues at 10:06 pm (2206), 43 minutes after receiving our message.

- **President Ahmadinejad's Letter to George**

(24K)

King George's Cabinet dismissed President Ahmadinejad's letter as offensive and insignificant, without offering a text version to the public. They also emphasized its "impossible" length of "18 pages," when in fact it fits on half that many. Reading the letter gives one to see the hoax of Bush's "Iran Threat" ploy. This file was typed from a photocopy provided by France's Le Monde newspaper, with Christ's original name replacing the pagan 'Jesus.'

- **Rattrap Snaps**

(28K)

Roman Catholic lie, Veronica's Veil, etc., exposed as witchcraft symbols.

- **The "magic" of Electromagnetism (Associated Press)**

(3K)

Scientists admit electromagnetism can be used to make physical objects invisible to human eyes.

- **THE MADRID DOCUMENTS**

(170K)

We composed the 31-page "Madrid Documents" in response to the March 11, 2004 train bombings in Spain, and delivered the documents on March 31, 2004. Included in these is a seven-page letter called "The Spark" which we urgently disseminated only days before the attacks. Notice that in the Documents' cover letter to the advisor to the Spanish Ambassador in the Dominican Republic, we warned of additional attacks planned for April 2004. Only 3 days later, Spanish intelligence intercepted "suicide" terrorists hiding in the Madrid suburbs. When the police closed in on them, explosives were detonated in their apartment, killing seven of them -- and one police officer -- but failing to set off the suicide bomber belts found on their dead bodies, indicating a glitch in an aborted CIA mind-control operation.

- **VeriChip In America's Hospitals (Washington Post)**

(4K)

The VeriChip bionic implant is being forced upon the national medical industry.

- **War-n-Terror**

(31K)

In Word format, exactly the same report as available on the War-n-Terror page.

- **With War Won, Battle's But Begun**

(51K)

This 8-page letter of alert from August 31, 2006 was typed on a PC without Internet connection, warning of USA's secret electromagnetic remote arson technologies, and plans to attack Russia and the Middle East, among other things. On 9/01, Iranian plane was targeted, killing 28. This message was then distributed internationally, to the shame and contempt of our enemies.

RE: ALEXANDER LITVINENKO

Dear [redacted]

This letter is in response to your offices request for assistance in relation to the Alexander Litvinenko investigation. First, I would like to extend an offer for the Federal Bureau of Investigation (FBI) to possibly provide technical assistance in this matter with regards to the nuclear/radiological aspects of this incident. The FBI in coordination with other cognizant United States Government National Laboratories and supporting interagency infrastructure have capabilities to assist with not only traditional forensic analysis of radiologically contaminated materials, but also with forensic analysis of nuclear/radiological materials in efforts to provide attribution capability which might potentially identify the origin of these materials. That, in conjunction with other investigative information, may lead to the identification of possible perpetrator(s).

b6  
b7C  
b7D

Secondly, attached to this letter is an assessment prepared by the FBI Hazardous Materials Response Unit (HMRU) on Polonium.

I hope this information is of assistance to your investigation, and if you are interested in additional technical assistance or require additional information, please contact [redacted] at (Office) [redacted]

Sincerely,

[redacted]

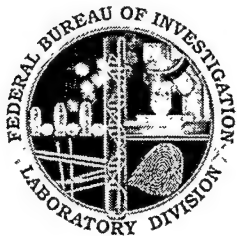

Assistant Legal Attaché

For: [redacted]

Legal Attaché

This document contains neither recommendations nor conclusions of the FBI. It is the property of the FBI and is loaned to your agency; it and its contents are not to be distributed outside your agency.

## Polonium

ALL INFORMATION CONTAINED

HEREIN IS UNCLASSIFIED

DATE 07-16-2010 BY 60322 UCLP/PLJ/JN

### Background

Polonium (Po) is considered a metalloid and has 28 isotopes and 7 isomers, all of which are radioactive. The predominant isotope, Po-210, has an atomic weight of 210 g/mol, an atomic number of 84 and a physical half-life of about 138 days. Polonium-210 is considered a rare naturally-occurring radioactive isotope (*i.e.* it is naturally found at low levels in soil, water and food). It is a progeny (*i.e.*, a decay product) of natural uranium, specifically uranium-238.

Polonium was first discovered by Pierre and Marie Curie in 1897 while they were investigating the radioactivity in Uraninite (commonly called "pitchblende"). The Curies discovered that after separating out the Radium and Uranium, the remaining material was more radioactive than both of them combined due to the Polonium. Originally Polonium-210 was known as "Radium F". Historically, the Curies named the decay products of Radium in this manner (Radium A, B, etc.).

### Chemical and Physical Properties of Po-210

Physical Half-life	138.4 Days
Source	Naturally occurring from the U-238 decay chain
Melting point	254° C
Boiling point	962° C
Density	9.2 g/cm <sup>3</sup>
Principal mode of decay	$\alpha$ :5.30 MeV (99.9%)
Direct Progeny	Lead-206 (Pb-206) [Stable]

### Naturally Occurring Radioactive Material

Naturally Occurring Radioactive Material (NORM) is a group of radioactive isotopes that exist naturally (non-anthropogenic) in various matrices. The isotope Po-210 is a late product of the decay chain from Uranium-238. This decay chain also includes

b6  
b7C

Radium-226 and the well known Radon decay products. Polonium-210 is widely distributed in minute amounts in the earth's crust. Uranium ores typically contain less than 0.1 mg Polonium-210 per ton.

Due to its scarcity, Po-210 is difficult to obtain from natural sources and therefore is produced in milligram quantities artificially in nuclear reactors by bombarding Bi-209 with neutrons according to the following reactions:

### Polonium in Industry

Polonium-210 is used in industry as a static eliminator to dissipate static electricity in machinery. The alpha particles from the Po-210 ionize the adjacent air and neutralize the static electricity. The Po-210 is generally electroplated onto a foil and inserted into a holding device.

In addition, Polonium-210 can be combined with [REDACTED]

b7F

Open source information attributes this so-called [REDACTED] [REDACTED] source with providing [REDACTED] needed to initiate the nuclear chain reaction in the first generation of nuclear weapons.

Polonium-210 was also evaluated for use in thermoelectric generators and was used to power the first communications satellite. It was abandoned in favor of isotopes which had longer half-lives (Pu-238) or those that emitted beta particles (Sr-90).

### Hazards Associated With Polonium Isotopes

Polonium-210 is a pure alpha particle emitter and has a biological half-life of 50 days (*i.e.*, the time required for the body to eliminate half of the material taken in by natural biological means). The longest effective half-life (*i.e.*, the time required for a radionuclide contained in a biological system, to reduce its activity by half as a combined result of radioactive decay and biological elimination) for Po-210 is reported to be about 46 days in the kidney. The critical target organs for Po-210 are considered to be the spleen and kidneys.

Because Po-210 has such a high linear energy transfer, all of the energy in the 5.3 MeV alpha decay particle is transferred to the target cell. Polonium-210 is a naturally occurring radioactive decay product of the uranium-238 decay series and, as such, can enter the food chain, along with other uranium decay series isotopes. The estimated average daily dietary intake of Po-210 from food and fluids is about 1 picogram, and the average amount of Po-210 in the body is about 0.24 micrograms (with approximately 60% of the total amount present in the mineralized bone). Cigarettes have been found to contain in excess of 0.5 pCi of Po-210 per cigarette which has led to the hypothesis that it may be the primary culprit in the onset of lung cancer. Patients who have unexplained elevated Po-210 in urine specimens are usually asked about their smoking habits as this could be a cause for the elevated readings. Grazing animals in the Arctic have shown concentrations as high as 1000 pCi/kg of body weight, and Po-210 can be found in a variety of marine organisms.

The use of Po-210 in industry has produced several accidents involving internal exposures (e.g., rupture of polonium-beryllium sources, contamination from static eliminators, and improper handling of sealed sources). Urine and fecal bioassays are required for proper monitoring of internal exposures.

Since polonium follows a similar chemistry as selenium and bismuth, dimercaprol is often suggested as a possible treatment for Po-210 intakes. Dimercaprol forms stable chelates with mercury, lead, arsenic, gold, bismuth, chromium, and nickel. Dimercaprol is itself toxic, so the hazards of its use need to be carefully balanced against any benefits it may have in accelerating excretion and preventing tissue uptake. It has been reported in the literature that Russian investigators have reported some success with the use of dimercaprol derivatives in animal experiments.

For occupational exposures, limits have been established regarding intake of Po-210. The annual limit of intake (ALI) and the derived air concentration (DAC) that will result in a dose of 5 rem for occupational workers is listed below:

Isotope	Inhalation ALI ( $\mu$ Ci)	Inhalation DAC ( $\mu$ Ci/ml)	Ingestion ALI ( $\mu$ Ci)
Po-210 (W class, oxides, hydroxides and nitrates)	0.6	3E-10	3.0 (all forms)
Po-210 (D class, all other forms)	0.6	3E-10	
Gut Uptake fraction for Po-210			0.1 (all forms)

#### Some Additional Dosimetric Considerations

- 1 microCurie (1 $\mu$ Ci) inhalation of a Class D Po-210 compound will give a dose of 9.3 rem
- 1  $\mu$ Ci inhalation of a Class W Po-210 compound will give a dose of 8.6 rem.
- 1  $\mu$ Ci ingestion of Po-210 will give a dose of 2 rem.

- 
- 

The following table chronicles the sub lethal and the lethal range for acute radiation syndrome:

Phase of Syndrome	Feature	Sub lethal Range	Lethal Range
Prodromal Phase	Nausea, vomiting		
	Time of onset		
	Duration		
	Lymphocyte count		
	CNS function		
Latent Phase (Subclinical)	Absence of symptoms		
Acute Radiation Illness or "Manifest illness" phase	Signs and symptoms		
	Time of onset		
	Critical period		
	Organ system		
Hospitalization	% duration		
Mortality			

b7E

**NRC Regulations**

The quantity of Po-210 material exempted from NRC licensing is <0.1 uCi (10 CFR 20 Appendix C).

## FEDERAL BUREAU OF INVESTIGATION

Date of transcription 12/05/2006

[redacted] Ovation Pharmaceuticals (Ovation), Four Parkway North, telephone 847-282-1000, home telephone number [redacted] was interviewed at his place of employment. Also present during the interview from Ovation Pharmaceuticals were [redacted]

[redacted] and [redacted] After being advised of the identity of the interviewing agents and the purpose of the interview, [redacted] provided the following information:

Ovation Pharmaceuticals holds a license in the United States to sell succimer under the trade name Chemet. Chemet is sold in pediatric doses of 100mg Capsules and is used for treatment of lead poisoning in children. The 100mg capsules allow the product to be sprinkled on children's food, such a cereal. Chemet is not produced or sold in adult dosage form. Chemet is a chelating agent, meaning it binds with metals to facilitate removal from the human body.

Chemet was first produced by McNeil Consumer Products Division of Johnson & Johnson after FDA approval on January 30, 1991. Bock Pharmacal Company purchased ownership on October 16, 1995. Sanofi-Winthrop purchased ownership on October 30, 1996. Ovation Pharmaceuticals obtained ownership on July 25, 2003.

b6  
b7C

The drug substance (active ingredient) for Chemet was manufactured by Cilag of Switzerland, who recently transferred manufacturing to Azad Corporation, also located in Switzerland. Azad was recently purchased by the French owned company Aventis. The most recent batch of drug substance was produced in 2005 and totaled 350.18 kg, of which Ovation purchased 232.76 kg. The remainder of the drug substance batch was purchased by [redacted] e-mail address [redacted]

[redacted] contacted Ovation in an unsuccessful attempt to sell the remainder of the batch to Ovation.

Title:

MURDER INVESTIGATION;  
VICTIM - ALEXANDER LITVINENKO;

b6  
b7C  
b2  
b7D

**Synopsis:** Request receiving Divisions provide assistance to [redacted] in captioned murder investigation.

**Administrative:** Reference meeting held during 12/18-22/2006, between Legat London [redacted] WMDOU, HMRU and the [redacted] and reference telcall between ALAT [redacted] and UC [redacted] on 2/1/2007.

**Details:** For the information of receiving offices, since November 15, 2006, [redacted] has been investigating the poisoning of Alexander Litvinenko. On November 23, 2006, Litvinenko died and it was determined that his caused of death was Polonium 210 (P210) poisoning. [redacted] has done an exceptional job with this very complex investigation. In additions to adapting to the new constraints identified as a result of a radiological weapon being used, [redacted] has aggressively pursued assistance from other international law enforcement agencies for assistance.

163G-LO-14031 2007Feb 1 EC to WMDOU Re Litvinenko and [redacted] request.

To: Intelligence Directorate      Attn: UC [redacted]  
Translation and Development  
Unit III      International

b6  
b7C

Operations From: London  
Re: 163G-LO-14031, 02/01/2007

To date, [redacted] has identified two primary suspects in this matter:

[redacted] DOB [redacted] and [redacted]  
[redacted] DOB: [redacted] It is alleged that on at least 3 occasions attempts were made on Litvinenko's life by the suspects. The first attempt being moderately successful cause temporary illness; the second attempt was accidentally aborted; and the third attempt was successful. The murder is believed to have occurred during a meeting with the suspects where Litvinenko's was poisoned with P210 through a hot drink. Although suspects and the method of attack have possibly been identified, a motive in this investigation has not been determined. [redacted]  
[redacted]

Recently, a number of issues have developed which [redacted] has requested FBI assistance. From the inception of this investigation, the FBI has offer our full investigative capabilities in support of [redacted] efforts. [redacted] has requested assistance on the following issues:

b6  
b7C  
b7D

1. [redacted]  
[redacted]  
[redacted] (It is noted that this request was also made through none law enforcement channels and FBI assistance is required to [redacted]  
[redacted] It is note that this project what communicated to Laboratory personnel on 12/ 19/2006 via VTC)

2. [redacted]  
[redacted]

3. [redacted]  
[redacted]

4. [redacted]  
[redacted]

5. [redacted]  
[redacted]

To: Intelligence Directorate      Attn: UC [REDACTED]  
Translation and Development

6. [REDACTED]  
[REDACTED]

b6  
b7C  
b7D

7. [REDACTED]  
[REDACTED]

During this investigation, WMDOU has coordinated all investigative efforts and reporting. It is the opinion of Legat London that WMDOU continue to coordinate all the aforementioned efforts in conjunction with Legat London. It is noted that because of recent new reporting, some of the request are very time sensitive.
